UCPath Changes & Enhancements: February 18, 2022 – February 25, 2022

UCPath recently implemented the changes listed below.

TAM

Summary	Date
Resolved the issue preventing TAM business users from selecting actions for jobs/applicants	02/22/22

Did you know: Inaccurate job end dates can cause a variety of issues

- If the "end job automatically" checkbox is selected, the job will be automatically terminated on the job end date
  - If the job is terminated in error, a reinstatement needs to be processed which requires a significant amount of work to correct the job record and reinstate benefits
- If the "end job automatically" checkbox is not selected and the job reaches the job end date, the job will not be terminated, but:
  - The employee may be overpaid if they are no longer working and should have been terminated
  - The employee's benefits may change or drop even if the employee is still working, because jobs with past job end dates are not considered for benefits eligibility
- Leverage these Cognos reports to identify and validate job end dates and take appropriate action
  - R007: Job Record End Date Audit Report
  - R103: Jobs with Approaching End Dates (i.e. 30/60 day parameters)
  - R384: Escalation/Reminder of Approaching Job End Dates (i.e., 10-day parameter and Expired End Dates)

Other Updates & Reminders:

- Job configuration changes and location specific configurations can be viewed on the Location Support Site
